

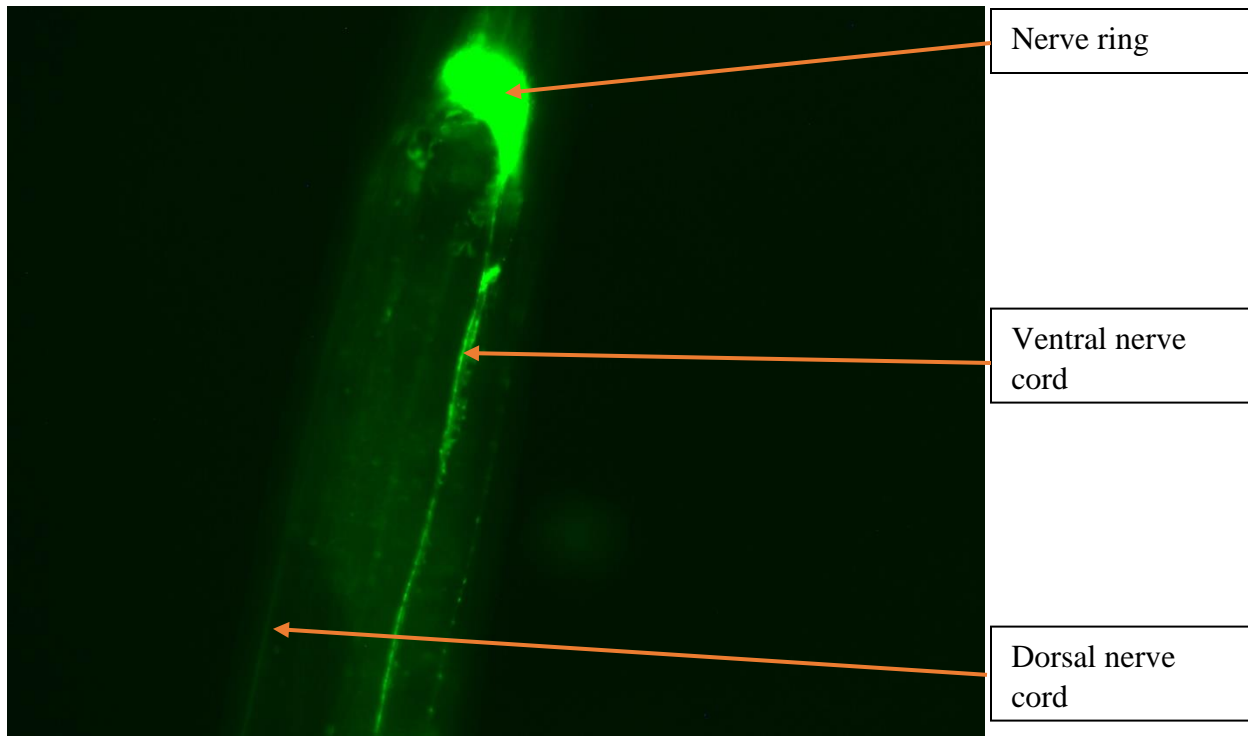

Figure 2: Transgenic *C. elegans* Expressing Jellyfish GFP Viewed Under Blue Light (Total Magnification 400x)

Pictured is a *C. elegans* expressing jellyfish GFP viewed under blue light at 400x total magnification. Relevant structures of the nervous system are labeled. The dorsal nerve cord is definitely there, it's just much less visible than the ventral nerve cord. The gut may have auto-fluoresced, but we were more interested in the nervous system than the digestive tract.
